Follow along with the test [here](#).

My mum's a worrier.

She always has been. She pretty much worries about anything and everything.

What people think, what people will say and what will happen if she does this or that.

I have tried to tell her for years that you can not control what people say, think or do or what will happen, you just have to plan the best you can.

The problem with worry is that it stops you from doing things (sometimes).

Mum has missed out on a lot of experiences because she has been so worried about what will happen.

She never learned to swim because she worried about whether she would float or sink.

She never learned to drive...because she was just worried about so many different things.

I am not saying she hasn't had a full and happy life (She had me...the best of 4 😊) it's just she could have probably included a few more good memories, if she would have not worried about the outcome so much.

But while she understands what I am saying she still can not fight the habit of worry.

To be honest I am a lot like my mum but over the years I have learned to ignore that side of me (to some extent) which is why I often face challenges head on.

It's not that I don't think about the consequences of my actions any more, it's more that I don't want that "worry voice" to control my life.

I know that once it starts murmuring if I don't do something to silence it quickly, then it can stop me in my tracks.

The problem is it can still take me by surprise and I may make bad decisions based on worry before I realise that is what I have done.

When I came up with the "*how to double your bank in 90 days or less*" idea...

There was the worry i was exposing myself in a way not many people in our industry do.

I mean anything can happen with betting system and as we are seeing they normally do.

It didn't help when I read a post about betting in the winter and how much more unpredictable it can be than in the summer season...trust me to pick the winter.

Although I agree...it certainly is harder work in the winter I hope, because I base my systems on statistical information and ratings systems that I should be able to get through them relatively unscathed.

But...

Even the best laid plans can go wrong...

And even in this test I have made some rash decisions based on worry...

When I decided to change the odds range of the lay system is one example.

And the other is the back system...but I will tell you about that another time.

If I hadn't of touched the lay system and changed the price range then I could be boasting that I doubled the bank within 23 days and ended the test there and then.

But I didn't and although you can see from the results of lay(system 2) I have doubled the bank, I feel obliged to carry on the test to see what happens with lay(system 1) as well.

There is another reason I want to continue the test.

In fact there are two.

The first is from the start of the test I have said that staking to 10 points liability is just too much and so even though I have used this to prove I can double my bank. I would much rather do it using 5 points liability, which would be more like you would do in the real world.

The second reason is the place system hasn't made a contribution to profit yet which is a little annoying and I would really like to see it help us out.

OK actually there is also a third reason...

I want to see what happens with this 1.02 to 1.99 test.

To be honest I am not sure if this is going to work long term but so far it looks as if it could.

It has also led me down another test path I hadn't considered before which hopefully I can share with a number of lucky individuals soon.

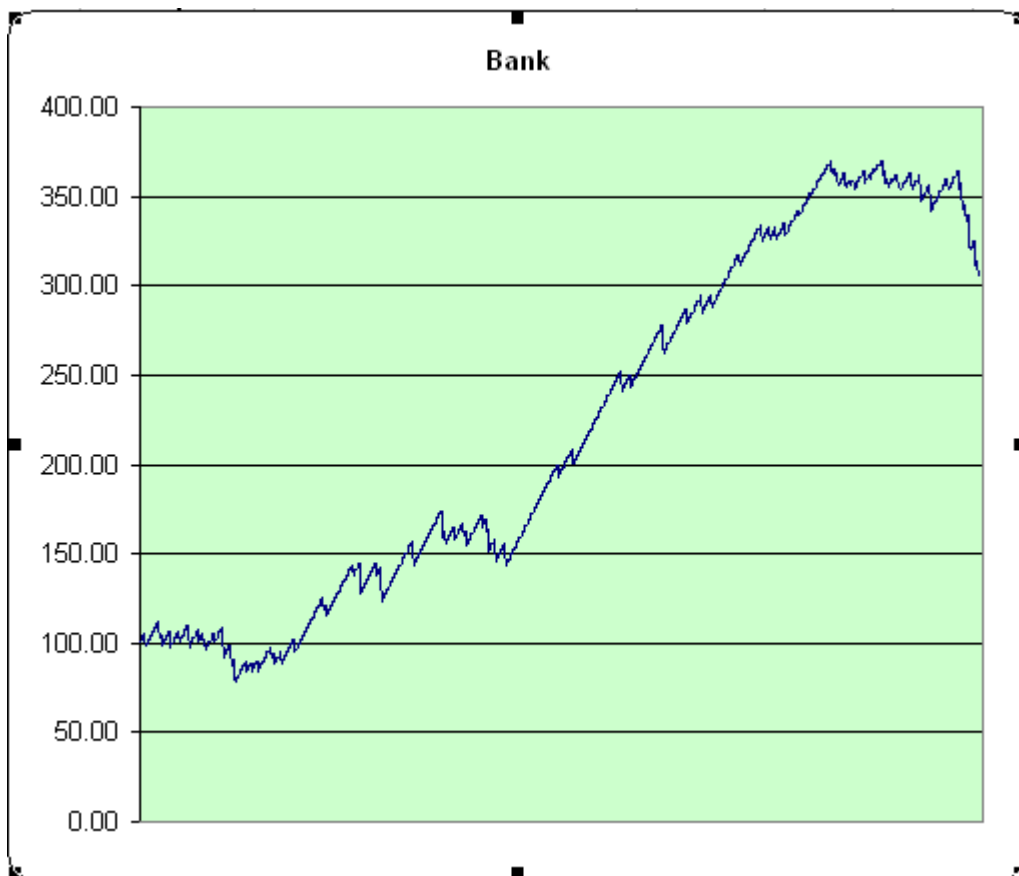

But today I wanted to talk about lay(system 1) because I hate to say it...but it is worrying me (see what I mean).

I have been following this system for quite a few months and it has had its ups and downs but nothing like this...

Which has obviously led me to the question...why now?

The thing is what we are seeing is just weird because it is like a dive off a cliff which to be honest doesn't look like it is going to stop any time soon

Let me show you what I mean...

As you can see the system didn't start of profitable but we new that and was expecting a down turn but not like you can see happening today.

You're looking at the results from just shy of 800 matched bets.

But the system is a sub-system of another.

What we need to do is determine what may be happening to the system and why.

There could be 3 things going on...

1. The system is just going through a losing streak we haven't seen before. (Well I know it is but I am just reflecting on the obvious)
2. The average price of a loser has increased causing the losers to hurt the bank more.
3. Something has changed in the selection method to cause an issue.

Well we know 1 is happening and I am pretty sure the rating system is working the same way it has all along, although at this time of year things can get a little weird.

I think it is plain to see at the moment we are getting more losers than we have before.

But what we do have to do is keep an eye on the strike rate and average losing price to make sure we are not seeing major issues.

When I started telling people about this system on the 18/01/2013 these were the facts from our own testing.

790 selections.

54 Losers

1 loser every 14.63 selections (Average)

93.16% strike Rate.

7.74 Average losing price.

This is what they look like at the end of the 04/05/2013

962 selections

92 losers

1 loser every 10.46 selections (Average)

90.44% strike rate

6.59 Average losing price.

So you can see quite clearly from the above that although the strike rate has dropped by almost 3% (this would be expected when you are going through a losing period) the real problem is purely just the number of losers per selection.

This has increased by quite a bit and is showing exactly where the issue lies.

What is really interesting is that our average losing price has dropped I thought it may have gone the other way.

But if we just take it from when we started the test it looks even worse.

175 Selections.

38 losers

1 loser every 4.61 selections (Average)

78.29% strike Rate.

4.95 Average losing price (That will change because we used selections all the way down to 1.02 at the start.

It certainly shows this system is in trouble and all we can do is wait and see.

Unfortunately at 10 points liability we are going to lose our bank (we have already if we use the original pricing) where we may have had a bit longer at 5 points.

There is one other thing to look at though and that is the new price range of 8 to 999.

Now I know this will not be totally accurate because it would depend on some variables but if we change the price range from 7.8 to 999 this should be reasonably accurate for this amount of selections.

Here is what we get...

102 Selections.

14 losers

1 loser every 7.29 selections (Average)

86.27% strike Rate.

8.84 Average losing price

So now we are seeing a higher average losing price but we are not losing as often but still far too often to make a profit.

All we can do now is wait to see what happens.

Is this a good time to say "Fingers crossed"?

Thank you as always for reading I really appreciate it.

Malcolm

Disclaimer:

This report is for information only. In no way we are advising you to act on the report or to bet on live markets. Please seek proper advice if you are unsure what to do.

Our results and reports are based on betting through Bots on the Betfair market around 60 seconds before the off.

Because our prices are based on what we have achieved on the market and not SP or BSP we can only show what happened to us.

Unmatched bets, prices out of range and other factors may influence your results compared to ours so we can in no way guarantee that you will achieve similar results.

In fact your results could be worse.

Please see Betfair's information on how they match bets.

Matched bets can be influenced by timing, stake amounts and other factors.

Online or off line betting is not appropriate for everyone.

There is a substantial risk of loss associated with betting. Losses can and will occur.

No system or methodology has ever been developed that can guarantee profits or ensure freedom from losses.

No representation or implication is being made that using the information on this report/article will generate profits or ensure freedom from losses.

Hypothetical performance results have many inherent limitations, some of which are described below.

No representation is being made that any account will or is likely to achieve profits or losses similar to those shown.

In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular betting program.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight.

In addition, hypothetical betting does not involve financial risk, and no hypothetical betting record can completely account for the impact of financial risk in actual betting.

For example, the ability to withstand losses or to adhere to a particular betting program in spite of betting losses are material points which can also adversely affect betting results.

There are numerous other factors related to the markets in general or to the implementation of any specific betting program which cannot be fully accounted for in the preparation of hypothetical performance results and all of which can adversely affect actual betting results.

HYPOTHETICAL OR SIMULATED PERFORMANCE RESULTS HAVE CERTAIN LIMITATIONS.

UNLIKE AN ACTUAL PERFORMANCE RECORD, SIMULATED RESULTS DO NOT REPRESENT ACTUAL BETTING.

ALSO, SINCE THE BETS HAVE NOT BEEN EXECUTED, THE RESULTS MAY HAVE UNDER-OR-OVER COMPENSATED FOR THE IMPACT, IF ANY, OF CERTAIN MARKET FACTORS, SUCH AS LACK OF LIQUIDITY.

SIMULATED BETTING PROGRAMS IN GENERAL ARE ALSO SUBJECT TO THE FACT THAT THEY ARE DESIGNED WITH THE BENEFIT OF HINDSIGHT.

NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFIT OR LOSSES SIMILAR TO THOSE SHOWN.
